ABSTRACT
               A record keeping system for adult basic education
using automatic data processing was designed and operated for one
year by the Arizona Research Coordinating Unit of Northern Arizona
University. During the year, there were 3,163 students enrolled in
160 classes in 19 projects. Females outnumbered males by nearly two
to one but male enrollment increased during the year by 52.8% while
female enrollment declined 3.8%. Problems incurred: programing and
processing delays in the data processing center; an inefficient
communications system between the Division of Adult Basic Education
and the Research Coordinating Unit; inability of adult basic
education personnel to fully comprehend the data; difficulties in
programing due to highly flexible input schedule; difficulties by
teachers and project officers in using the input forms; and inability
of the Research Coordinating Unit to know of some data not received.
Improvement was recommended in the following areas: data collection,
record keeping, job assignment, and cost accounting. (author/nl)

Introduction

Adult Basic Education requires greater flexibility in curriculum, in scheduling, in classifying students, in measuring achievement, and in financial arrangements than most educational programs. Needs of students and the levels at which they enter classes vary widely. Their achievement in class and the resulting benefits they receive also range from virtually nothing to the unbelievable. Classes begin and end at different times depending on the availability of faculty and students, on funds and facilities, and on the organizational efforts of the State Division of Adult Basic Education. The effect of so many variations in classes and programs puts a strain on record keeping that results either in frustration or simply ignoring adequate accountability for the human effort and public expenditures that go into each program. In most cases an extremely laborious and expensive hand system is used which can never be completely reliable.

The use of computer techniques in producing a more adequate and reliable system has only become possible with the development of modern data processing. The potential benefits in electronic data processing are obvious and go considerably beyond simplification and greater reliability. They include complex program analysis on a current basis as an operational asset in constant program improvement. Data processing makes it possible to have a complete analysis of entire programs -- not six months or a year after the results are in, but month after month while they are going on. This is the only time, after all, when changes and improvements can be made to give students who are currently enrolled the best education possible, an education from which each one of them individually can realize the greatest benefits. Computerized data systems make it possible to tailor programs to the needs of students while they are students, not merely to benefit from mistakes made in previous classes. Progress is thus accelerated rather than merely accumulated.

Summary

A record keeping system for Adult Basic Education using automatic data processing was designed and operated for one year by the Arizona Research Coordinating Unit of Northern Arizona University. Input forms were designed and field tested and procedures were developed for enrollment data and monthly reporting. A computer program was written giving eighteen pages of statistical tabulations of student information, class participation, individual achievement and per student costs. A second program was written correlating eighty pairs of variable student characteristics such as family income, previous education, age, ethnic group, and achievement. Finally a followup survey was conducted asking all students enrolled during the year to identify specific benefits received.

Altogether during the year there were 3,163 students enrolled in 160 classes in nineteen projects, seventeen of them supported by the Division of Adult Basic Education and two by other federal funds. At the end of the year there were 2,147 students for whom reports were being made. The others had completed the program or dropped out. Phoenix Union High School with fifty-four classes accounted for fifty percent of the the total state program, followed by Tucson District No. 1 and Sunnyside in the Tucson Area which contained sixty percent of the State's students. Females outnumbered males by nearly two to one, but male enrollment increased during the year by 52.8% while female enrollment declined 3.8%. From a 76.2% response on ethnic data, 58.9% were Mexican-Americans, 29.9% Indians, and thirteen percent Negroes. A 38.3% reponse on highest grade in school revealed three-fourths with more than a sixth grade education and two-thirds were eighth grade graduates. Five percent were high school graduates, about the same number as those with less than a third grade education. One-third dropped out during the year. About ten percent have become employed, received better jobs, cr entered vocational training. A wide range in behavioral and attitudinal achievements is evident.

Problems incurred in developing and operating the systems were: programming and processing delays in the data processing center, an inefficient communications system between the Division of Adult Basic Education and the Research Coordinating Unit; inability of Adult Basic personnel to fully comprehend the data delivered; difficulties in programming due to a highly flexible input schedule; difficulties by teachers and project officers in using the input forms; and inability of the Research Coordinating Unit to know of some data not received. Most of these problems were overcome to a considerable extent, some of them completely. Two limitations in results should be pointed out: the Adult Basic Division may not have become adequately familiar with the system to achieve maximum benefits under its own operation in one year; and

ERRATA

The third sentence of paragraph two, page 2, should read:

Phoenix Union High School with fifty-four classes accounted
for 39% . . . . .Tucson District No. 1 and Sunnyside in the
Tucson area which contained 21% of the State's students.

completely satisfactory collection of data from teachers and project officers was not achieved. Both of these limitations may be overcome with concerted effort in the next year.

Recommendations by the Research Coordinating Unit for continuation and further development are: (1) carry out the curriculum studies originally planned for phase two the second year; (2) tighten up record keeping procedure at the class and project levels; (3) improve the kinds and quality of data gathered on student achievement; (4) assign a single member of the Adult Basic staff to full responsibility for the system's operation; and (5) revise and expand the cost data for better cost accounting and perhaps eventually cost effectiveness information.

Design and Operation

In late summer of 1968 the Arizona Division of Adult Basic Education requested the Research Coordinating Unit to design and operate a record keeping system which would include the identification and coding of all information relative to student enrollment, current status, course completion, dropouts, student progress, curriculum data and teacher evaluations. Monthly printouts were specified containing enrollment and progress information, and quarterly and annual reports would be developed from data in the computer suitable for U.S. Office of Education reporting purposes and program operation analysis. It was also requested that a followup be made of all students enrolled in the entire Adult Basic Education program named "Vanguard" upon dropout or completion. It was intended at that time that the program should be operated by the Research Coordinating Unit for two years and during the second year an in-depth study of the curriculum would be made, but the second year phase has been turned back to the Division of Adult Basic Education. The Research Coordinating Unit's responsibilities for phase one have been completed in the following manner.

The original intent was to use forms already in use by the Adult Basic Education Division for collecting enrollment and other data, but so many modifications were found to be necessary for adapting these forms to data processing that it was thought best to re-design them completely. Ordinary 5½ x 8½ card stock was used for student enrollment data printed on both sides with twenty-one items of information in addition to project and class identification. Teachers were asked to fill out a card for each student after two weeks in class, the purpose for the delay being to eliminate processing those who attended once or twice but did not pursue the course further. Another consideration was the reluctance of some students to enroll on their first appearance in class. For the same reason students were not required to supply information other than their name and address if they did not wish to do so when the enrollment cards were intially filled out. In those cases teachers were asked to supply the missing information later when the student's confidence increased, and these data could be added to the files in the computer. Individual student files were identified by master file numbers made up of project number, school number, class number, and student entry number.

Data collected on the student cards included the following:

1. Name and age

2. Address and telephone number

3. Social Security number, and sex

4. Home location

4

5. The agency or means through which the student had been referred to the class

6. Ethnic group

7. Marital status

8. Language or languages spoken in the home

9. Language or languages spoken by children in the home

10. Highest grade level completed both in the United States and outside of the United States

11. Number of years the student had studied English outside the United States

12. Particular program under which the student was enrolled (WIN, Voc-Ed, MDTA, etc.)

13. Programs in which the student had been previously enrolled

14. The student's own reason for enrolling

15. The student's longest period of fulltime employment

16. Position in the family (head of family, dependent, etc.)

17. Source of income

18. Estimated annual income of the student

19. Estimated annual income of the family

20. Dependents

21. Occupation (present, primary, or recent)

Class and project record books using pre-printed forms and tear out carbons were designed in consultation with a commercial firm, printed and bound for distribution to the teachers and project directors. The teacher's record contained a foldout sheet for student names and monthly tear out carbons for attendance, progress, achievement tests administered, test scores, audio-visuals used in class, method of sentence pattern practice, languages other than English used in class, subjects taught and hours spent in each, grade levels achieved in each subject, texts used in class and the hours in each, general results of the texts used, reasons for dropping out for those who did, and final results achieved. The project officer's record contained sources of funds, amounts allocated, amounts used monthly, and balances. Both records contained monthly evaluations of classrooms, teachers, volunteers, students, and lessons. Project officers were responsible for collecting the monthly tear out carbons and forwarding these to the Research Coordinating Unit. Here they were checked for completeness

and possible errors, then keypunched for input into the computer.

After the system was in operation it became evident that insufficient control of data collection was being exercised by the Research Coordinating Unit resulting in numerous failures on the part of teachers and project officers to carry out their reporting responsibilities. Revisions were instituted but this problem was never completely solved. It also became evident that quality control procedures were needed in processing the data to overcome human errors and failures in the system. The final system as developed through experience is shown in the flow chart in Figure 1. Back-up files were duplicated and retained by the Research Coordinating Unit and transferred to magnetic tape for processing in the State Department of Public Instruction's Univac 1005 computer.

Printout tables were designed to give tabulations of each item of information collected on the enrollment cards and collected monthly from teachers'and project directors' tear out sheets. A computer program for the Univac 1005 was written to produce the tabulations in eighteen pages each month. Tabulations were both current and cumulative depending upon the nature of the data. Copies of the monthly printout were xeroxed after adding explanatory notes on the column headings and delivered to the Division of Adult Basic Education.

Near the end of the year when data were sufficiently complete for evaluation a program was written for Northern Arizona University's IBM 1130 computer to develop a frequency distribution of student characteristics. The data on punched cards were put into the IBM 1130 and the program run producing 143 pages of printout data. These were sent to the University of Arizona to a special team funded by Adult Basic Education for further analysis and a copy given to the State Division of Adult Basic Education. A tabulation of the data used and the distribution of variables are contained in Table 1.

Followup procedures were developed using an eighty-column punch-card printed questionnaire for automatic scanning of the returns. The cards were addressed on the Univac 9300 computer using the names and addresses of students from the enrollment files. These were bulk-mailed with provisions for forwarding to new addresses in the same post office jurisdiction or returning to the Research Coordinating Unit if undeliverable. Forwarding addresses of those who had moved out of their former post office jurisdiction were supplied by the postal service. A response of only fourteen percent returns was achieved because a single mail-out was conducted. However, a random sample of the non-respondents was developed and telephone or personal contact made with each person in the sample who could be located. A correlation of the responses from the second followup validated the responses of the first followup. This validation is depicted on the printouts on pages 70,71, and 72 of the Appendix. An explanation of the sampling technique is on page 30.

VARIABLES USED IN FREQUENCY DISTRIBUTION
OF STUDENT CHARACTERISTICS

After sufficient data had been gathered to produce quantifiable
statistics, a frequency distribution of student data supplied by both
teachers and students was carried out. The printout was made for a
special evaluation team at the University of Arizona and was also
used by the Research Coordinating Unit in some of the analyses appear-
ing in this report. The Table below contains a list of the variables
used in the frequency distribution.

Age

    v. Sex
    v. Ethnic Group
    v. Reasons for Enrollment

Sex

    v. Enrolled Currently
    v. Reasons for Enrollment

Age Home Location Ethnic Group	v.	Students who entered vocational or job training

Results

The results of this project are the system itself, experience in using it, and some knowledge of what it can do. There are a number of ways it can be improved and one of the results at this stage is knowing how to redesign parts of the project to bring about improvements. On the following pages a complete printout is shown just as it comes from the computer each month giving both current and cumulative data. Regular projects are listed and totalled by counties. Other federally funded projects using the Adult basic reporting system are listed separately, and State totals appear at the bottom of each page.

Enrollment Data

The first six pages contain data from the student enrollment cards and these are incomplete only because students did not supply all of the information requested. Teachers were not required to collect missing data although the system was initially designed to pick these up in later meetings of the classes. Since the enrollment forms were cards, and these were turned in by the teachers with no record of which data had been supplied and which omitted, it was virtually impossible for the missing information to be supplied later. Enrollment cards in the future should be multiple carbons. In many cases teachers retained the enrollment cards of individual students and even whole classes until more complete data could be supplied. This created a problem for awhile in the computer, which was programmed at first to reject class participation data for any student not having enrollment data on file.

The Adult Basic Education Division can see from Tables 2 through 7 that at the end of the year there were only 2,147 students enrolled. Actually the Division believes there were more. The printout is an indication that either some teachers have neglected to send in enrollment cards or the Division's estimates are based on faulty information. Since the data are printed out each month a pattern has already been established and Division personnel have been in a position to know which if either of these possibilities is true.

In the same way patterns in ethnic representation, employment experience, income, grade level, age, sex and purpose can be observed at any given time. Changes in these patterns may also be observed by comparing one month's printout with those for previous months. The most noticeable pattern here is the absence of data for large numbers of students which the Division wanted but was not getting. Other patterns may be evident to program administrators making possible management decisions for program improvement as it goes along.

RA-TV - Radio and/or television

Class Participation

The following pages of the printout contain data from che monthly reports submitted by classroom teachers. The reports were originals from the teacher record books of entries made during the month. Some students might have nothing except attendance recorded. Other data were cumulative by class, that is, if three students took the California Adult Achievement test one month the printout would show three. If four more took it the next month the printout would then show seven.

Satisfactory completion of a subject area on any of the tests was recorded by student and totalled in the same manner in the computer by project, county, and state. It may be noticed in Table 8 that most achievement was in reading, math, spelling and vocabulary in that order although the number of students in any one subject was ten percent or less. It must also be pointed out that this would represent actual achievement only if the same tests were administered twice to each student with the second test measuring achievement beyond the first. The data collected did not show this and collection procedures should be altered to do so.

Two of the class participation Tables, 9 and 10, show characteristics of the methodology used rather than of students. Here data were recorded by student to show cumulative impact. Not all students participated in each subject or used each learning technique. The computer has each student's individual participation record, however, and if the Division of Adult Basic Education should want to know the relationship between subjects taught and audio-visuals used and other class participation data or student enrollment data it can be determined just as easily. The opportunities for detailed analysis of the State's entire program or any part of it on a month by month basis are almost unlimited.

This page indicates why the students dropped out of class:
EMPL - took a job
TRN - entered a training program
CH-JOB - Job Change
MOVED
HLTH - health problems
FAM - PROB - family problems
LACK INT - lack of interest
CHD CRD - child care
OTHR - other reasons

(The first column is membership, the remaining columns are dropouts.)

Student Achievement

The following pages show numbers of students in each project who received certain benefits in the judgment of the teachers. These achievements were noted in the teachers' record books when they became evident and then recorded. By printing both monthly and cumulative totals, project officers and division personnel can observe peak periods of achievement as well as totals. If relationships between either peak periods or cumulative achievement and methods used are wanted, the computer can produce this information. If relationships between student characteristics and individual achievements are wanted, this can also be programmed and known. In all probability, the Division of Adult Basic Education will want to develop such information and can easily do so. There is no possible way to do it by hand.

Achievement data show comparatively few students receiving benefits, but it must be pointed out that these are adults with personal lives of meager achievement up to this point. To read for the first time, or to vote, or to perform any of the activities listed here for the first time in one's entire life is an event of far greater impact than that one achievement alone. It can be the first domino to fall in a row that stretches for thirty or forty years or more of far greater achievements.

The graph on page 30 shows student achievement as reported in the followup. In some respects these are the most valuable data available because the information comes directly from the students themselves after they have left the program. Again, the followup was by no means exhaustive but illustrates what can be done with this technique. Improvements in both the data collected and the procedures used should be made each year.

FIGURE 2

FOLLOWUP SURVEY

At the end of the school year a followup of all students enrolled was undertaken. Addresses were available for only 2,533 of the 3,163 enrolled, and these were sent card questionnaires. Only one mailout was made with a response of eighteen per- cent. Appendix L a stratified random sample of the non-respondents was drawn and these were followed up by telephone and in person. Appendix M the data from the sample correlated sufficiently high with those of the first response group to suggest fairly valid results in the total followup. Appendix N the chart in Figure 2.

1. How many finished the class?
2. How many learned what they wanted to learn?
3. How many were helped by the class to get an 8th grade certificate?
4. How many have joined any clubs since starting the class?
5. How many have been helped by the class to prepare for job training?
6. How many more have a job?
7. Of those, how many are full-time jobs?
8. How many were helped to get their jobs by the class?
9. How many are planning to take other classes?

Bar chart:
- Finished the class: 65%
- Learned what was wanted: 75%
- Class helped toward 8th grade certificate: 35%
- Joined clubs: 5%
- Class helped prepare for job training: 50%
- Now have a job: 62%
- Full-time job (of those who have jobs): 89%
- Class helped get present job: 20%
- Planning to take other classes: 88%
Financial Data

The allocation and disbursement of funds can easily be kept in paper record files, but there are advantages in placing this information in the computer. Project officers and Division administrators can see at a glance each month where they are in relation to their budgets. The greatest potential benefit, however, is to relate costs to performance. This is done here only in terms of cost per student, but with the data in the computer any kind of cost/performance analysis can be made.

Financial data should be the most reliable input in the system, but only if the Division exercises proper care to see that actual records are used. The Research Coordinating Unit had no way of knowing if the financial input was reliable because the data came from project directors' reports rather than Division records. These reports were extremely uncertain in coming in and for several months no financial data printouts were made because of insufficient data. The following table should be reviewed only as an indication of the kind of printout that is possible, not as a reliable record of costs this year.

Cost data should actually be collected from each source rather than from the Division of Adult Basic Education only. In some cases funds from more than one Federal program were being used in the same project, not necessarily for the same students. Local resources were being contributed in varying kinds and amounts. Complete cost accounting data are difficult to assemble, but as educational institutions turn increasingly to data processing this task will become easier. In any case, it is essential if cost effectiveness ratios are desired for any kind of proper program evaluation.

Enrollment Characteristics

On the following pages are graphs and charts in which some of the data from the whole year's series of printout tables have been illustrated. Some of these graphs could have been prepared from hand records but not as easily. Some of them are possible only because monthly summaries were generated in the computer. They are presented here not to show the results of the Adult Basic Education program as much as to suggest the translation of computer printout data into more familiar forms of graphic communication.

To further illustrate the graphic analyses made possible by computer printouts, some of the charts contain data from the monthly tabulations combined with frequency distributions of student characteristics.

Oct. Nov. Dec. Jan. Feb. Mar. April May June July
The first of the figures on the figures on the results of the reporting system indicates the growth of the Adult Basic Education program in Arizona. Generally speaking, most classes began in October, 1968. The sharp decline in December was due to a lack of reports on the part of three projects. (see Figure 4)

The growth indicated between March and April can be attributed partially to the beginning of projects at Central Arizona College (see Figure 4) Glendale, and Indian Oasis.

Although the data cannot be correlated to determine the exact time, 24.6% of the students first learned of the program from other students. This word of mouth publicity probably accounted for the increased enrollment in the total program.

Project and Classes

The Adult Basic Education program in Arizona is a statewide program.
Figure 3 is a capsule view of the total Adult Basic enrollment for the
school year. This figure provides enrollment by project location, head
count and month. Note that classes were begun from October through May.
The highest enrollment numbers appear in the larger metropolitan areas.
Numerous classes are being taught in these areas because the population
is available while only one class may be in operation in a small community.

The sharp drop in enrollment in December is partially accounted for
by the fact that three locations (Coconino, Chinle, and Nogales) did not
report. These three locations had an enrollment of 157 students which
was 42.6% of the total drop of 368. When these three locations reported
in January the enrollment again increased.

Of the seventeen projects using the reporting system, five projects
were in Maricopa County -- Phoenix Union, Mesa, Glendale, Dysart, Tolleson
and the State Hospital. Pima County had three projects -- Sunnyside,
Tucson and Indian Oasis. Eight counties had one project each -- Apache
at Chinle, Coconino at Flagstaff, Graham at Safford, Navajo at Holbrook,
Pinal at Central Arizona College (Coolidge), Santa Cruz at Nogales,
Yavapai at Prescott, and Yuma at Arizona Western College (Yuma). Four
counties did not have any projects -- Cochise, Gila, Greenlee, and
Mohave.

Phoenix Union held classes in twenty-two different locations in the
Phoenix area. Sunnyside district held classes in fourteen locations and
Tucson District #1 in seven locations in the Tucson area.

Central Arizona College's project was held in nine different cities
which include -- Superior, Maricopa, Coolidge, Randolph, Florence, Casa
Grande, Eloy, Eleven Mile Corner, and Stanfield. These nine cities were
responsible for more than twenty separate classes.

FIGURE 5
AVERAGE MONTHLY ENROLLMENT BY PROJECT

This figure illustrates the average monthly enrollment by head count and location. The total Adult Basic Education average monthly enrollment was 1,776.8 students. This graph depicts the actual average monthly attendance - not the need for such classes. In the reporting system as developed here, attendance and enrollment are the same.

This is true because both attendance and enrollments are carried on a current basis, as requested by the State Department of Adult Basic Education. In order to determine cumulative enrollment it is necessary to add the dropouts to the current enrollment/attendance for a total figure.

Project	Value
Prescott	11
Chinle	20.3
Safford	32.3
Glendale	46.3
Coconino	21
P.U.H.S.	697.0
Dysart	18.8
Tolleson	21.6
State Hospital	69.8
Tucson	167.2
Mesa	65.8
Holbrook	10.4
Sunnyside	210.7
Indian Oasis	8.0
Nogales	105.7
Yuma	48
Central Arizona	169.3
MOP-MTC	179.3
SUN-SER	85.4

FIGURE 6

PERCENTAGE OF ENROLLMENT BY LOCATION

Location	Percentage
Chinle	1.1
Safford	1.8
Glendale	2.6
Coconino	1.2
Phoenix Union	39.2
Dysart	1.1
Tolleson	1.2
State Hospital	3.9
Tucson	9.4
Mesa	3.7
Holbrook	0.6
Sunnyside	11.9
Indian Oasis	0.4
Nogales	5.9
Yuma	2.7
Coolidge	9.5
Prescott	0.6
MOP-MIC	10.1
SUN-SER	4.8
This chart illustrates the percentage of average monthly enrollment by project. These are the same data as in Figure 5, except in percentage form. It is significant to note that three projects, Holbrook, Prescott, and Indian Oasis, had enrollments of less that 1%. Five projects, Chinle, Safford, Coconino (Flagstaff), Dysart and Tolleson, all had enrollments of less than 2% of the average monthly enrollments.

FIGURE 7

TOTAL ENROLLMENT BY SEX

This figure illustrates the proportion of males and females in the Adult Basic program by month (this is the only area in which responses were one-hundred percent of enrollment every month). The percentage of females in the program decreased from approximately seventy-two percent to sixty percent while males increased from twenty-eight to forty percent. By head count there were almost twice as many females as males. Notice that the number of females enrolled in June is 1,107 or forty-four less than the starting female enrollment of 1,151, a drop of 3.8%; however, the male enrollment of 732 in June shows an increase of 253 over the beginning enrollment of 479, an increase of 52.8%.

	Oct.	Nov.	Dec.	Jan	Feb.	March	April	May	June

■ Male   □ Female

41
FIGURE 8

AGE OF ENROLLEES
This figure shows enrollment by
age. Although the average total
monthly enrollment is 1,776.8,
average monthly responses in the
age area were only 1,187.8 or
66.9%. Almost one-third of the
enrollees who responded were in
the eighteen to twenty-four age
group. Almost one-fourth of the
enrollees were in the twenty-five
to thirty-four and the thirty-
five to forty-four age groups
each. In other words, approx-
imately eighty percent of the
enrollees who responded were
between the ages of eighteen
to forty-four. It is interesting
that as the age increased, the
percentage of enrollees decreased.
According to the frequency dis-
tribution data, the youngest
enrollee is twelve and the
oldest eighty-three.

Although Adult Basic Education
is designed primarily for adults
sixteen years and over, the data
indicates there were twenty-three
enrollees below sixteen years of
age.

Of these twenty-three, five were
twelve years old, two were thirteen,
five were fifteen years old. A
question which might be asked --
were parents enrolled in the program
bringing the children instead of
leaving them home, alone?

The group of persons sixty-five and
over comprised 2.6% of the enrollment
and included twenty-six students
between sixty-five and seventy, five
students between seventy-one and
seventy-five and six students
between seventy-six and eighty-
three years of age.

PERCENTAGES

31.2 — 18-24
24.5 — 25-34
24.2 — 35-44
12.0 — 45-54
5.5 — 55-64
2.6 — 65 & Over

FIGURE 9

ENROLLMENT PERCENTAGES BY RACE AND ETHNIC GROUP
Figure 9 shows the percentages of Adult Basic Education enrollment by race and ethnic group. The responses in these categories were 1,353.5 or 76.2% of the average monthly enrollment of 1,776.2.

The significance of this chart is that the last census reported that the groups most needful of basic education were: 58.8% Mexican-Americans; 29.9% Indians; and thirteen percent Negroes.

During the current reporting year, the Adult Basic Education figures show an enrollment percentage of: 66.3% Mexican-American; 3.9% Indian; and 12.9% Negro.

These figures are not meant to mislead the reader, so this explanation is offered. Of those people most in need of basic education, the figures were the 1960 census figures and include the entire population of Arizona. However, the second group of figures shows the percentage of the 3,163 people enrolled in the Adult Basic Education program.

It is significant that the program is reaching an equivalent amount of Mexican-Americans and Negroes while the Indian population is hardly being reached.

It is evident that the need has to be redefined, since the figures being used are nine years old. It is also evident, however, that the entire Adult Basic Education program has to be expanded to serve more people.

FIGURE 10

ENROLLEES EMPLOYMENT PATTERNS
The longest full-time employment of the student is shown here.
Of the average monthly enrollment of 1,776.8, 1,110.4 or 62.5%
responded to this question. Almost one fourth of the students
have never held a full-time job. The next largest group, or
18.8% held full-time jobs for six months to a year. The re-
mainder of the students or 57.7% appear to be fairly evenly
distributed between the other five categories.

FIGURE 11

FAMILY POSITION OF ENROLLEES
The category of family position was added to the printout in June, 1969 for the first time. This figure illustrates the family position of the 2,143 persons enrolled for that month. There were 1,721 responses to the questions or 80.3%.

Of the five possible categories, the head and principal wage earner category and the dependent category are almost identical. These two categories represent 80.5% of the responses.

A breakdown in two of these categories (taken from the frequency distribution data) indicates: (1) that 72.1% of the males and only 25.8% of the females are head and principal wage earners; and (2) that 11.8% of the males and 86.3% of the females are in the dependent category.

It is reasonable to conclude that most of the women enrolled in this program are not the head of and the principal wage earner of the family.

Because all of the data was not complete in the area of student supplied data, it has not been possible to define a prototype of the average adult basic education student. However, the data supplied on these figures can convey a general impression of the student, his background, etc.

FIGURE 12

INCOME SOURCE OF ENROLLEES
Figure 12 illustrates the source of income of the enrollees of Adult Basic Education while Figure 13 shows the amount of income of students and the amount of income of their families. Although the average monthly enrollment is 1,776.8, responses to Income Source were 1,172.8 or 66.0%; to Student Income, 1,013.4 or 57.0%; to Family Income, 1,025.2 or 57.7%.

Approximately two-thirds of the responding enrollees obtain their income from jobs, yet 43.9% have individual income of less than $2,000 and 22.2% have family income of less than $2,000.

In Figure 12, 63.1% have jobs and only 6.1% receive their income from Welfare. It would appear that there should be more people in these categories in this type of program. Perhaps these agencies need to inform their recipients and encourage them to further their education through this program. It would be interesting to know where the 28.4% in the "Other" category obtain their income. Perhaps these sources should be identified and added to the printout.

In many cases the data raise additional questions. Are the two-thirds who obtain their income from jobs the same ones as those who have family or individual incomes of less than $2,000? This could be determined by the computer. There are many examples of this throughout the data reported.

Chart data:

Category	Percent
Job	63.1
ADC	5.8
Title V	0.3
Social Security	2.0
Retired	0.7
Other	28.4

FIGURE 13

STUDENT AND FAMILY INCOME SOURCES

Figure 13 shows that the greatest number of students, 43.9% have incomes of $2,000 or less. Income is fairly evenly distributed among the "$2,000 to $3,000," "$3,000 to $4,000," and "$4,000 to $6,000" categories; however, only five percent have incomes over $6,000. From October, 1968, to March, 1969, no students appeared on the printout in the "Over $6,000" category which may be due to error. The enrollment in several locations dropped from March to April yet the number of students in this category increased. For example, Chinle dropped in enrollment from 25 to 22 students but the number in the "Over $6,000" columns increased from 0 to 3;
Coconino dropped from 24 students in March to 21 in April but the number in this category increased from 0 to 5. The number in this "Over $6,000" category are an average of the months in which an item appeared on the printout.

Family income is fairly evenly distributed with percentages ranging from 23.3% down to fourteen percent. The largest group is in the "$3,000 to $4,000" column and the smallest group again is in the "Over $6,000" column.

A comparison of student's income to income of the family shows a wide variance in the "$2,000" or less category. This can be explained by consulting Figure 11 which indicated that forty percent of the students enrolled in Adult Basic Education were dependents. Obviously then, those students who earned $2,000 a year or less were in this dependent category and provided a supplement to family income rather than the whole amount.

Student Income — Family Income

PERCENTAGES

43.9 17.3 18.2 15.6 5.0 22.2 18.8 23.3 21.6 14.0

$0 to $2,000 | $2,000 to $3,000 | $3,000 to $4,000 | $4,000 to $6,000 | Over $6,000 | $0 to $2,000 | $2,000 to $3,000 | $3,000 to $4,000 | $4,000 to $6,000 | Over $6,000

FIGURE 14

HIGHEST GRADE COMPLETED IN THE UNITED STATES BY ENROLLEES

Figure 14 illustrates the highest grade completed by the students within the United States. The responses to this query brought only a 38.3% response.

Since Adult Basic Education's primary purpose is to teach basic subjects, it is obvious that those students who have completed six or more grades of school did not feel competent in these areas and are therefore enrolled in this program.

This chart depicts the percentages of grade completions from information supplied on the enrollment card. The frequency distribution gives a more definite breakdown of the 72.9% who completed more than six grades in school.

Approximately 62.5% had completed grade eight or more, twenty-seven percent had completed grade ten or more, and five percent had completed high school or more.

To provide for more accurate reporting at another time there should be a space available for those people who did not attend school in the United States and a space to indicate at least twelve years of school for those who did attend school in the United States.
FIGURE 15

HOME LOCATION OF ENROLLEES
Figure 15 shows the home location of the Adult Basic Education
students. The figures were computed on a total enrollment of
3,163 with 1,809 responses or 57.2%. About one-half of the
enrollees live in "Core Metropolitan" area. Of the 897 responses
from students who live in these areas, 448 or 49.9% were in
the Phoenix Inner City and 221 or 25.6% were in the Tucson
Inner City. Three locations, Phoenix Union High School Dis-
trict (18.3%), Sunnyside (20.6%), and Central Arizona College
(17.7%) account for 56.6% of all students who responded in
the "Urban" group. The percentage for rural, non-farm, farm
and migrant categories correspond to the enrollments in these
particular projects, i.e., SUN-SER, Chinle, Yuma, etc.

A comparison of the home location of the students and the
projects indicates that the greatest number of classes are
being taught in urban areas. In actual numbers, of the 160
classes taught during the school year, 119 were in urban areas.
It is evident that Adult Basic Education in Arizona is currently
at least directed toward the urban population, which accounts
for 76.7% of the students.

FIGURE 16

HOW ENROLLEES LEARNED OF ADULT BASIC EDUCATION PROGRAM

How the enrollees became aware of the Adult Basic Education program is shown in Figure 16. Of the total 3,163 students enrolled, responses totalled 1,825 or 57.7%. It is significant to note that 24.6% of the students were referred by other students. Schools referred 17.9% of the students, and an undisclosed "Other" accounted for almost 1/3 of the enrollees. It is surprising that so few enrollees have been referred to the program by the Department of Welfare, the State Employment Service and the Veteran's Administration. Presumably these three agencies come in contact with many people who could benefit from the Adult Basic Education program, yet only 4.5% have been referred by these groups collectively.
FIGURE 17

WHY THE STUDENT IS ENROLLED

Figure 17 illustrates why the students are enrolled in the Adult
Basic Education program. Of the 3,163 total enrollment, 1,807 or
57.3% responded. It is curious that 23.5% of the students have
never been employed (Figure 10), yet only 12.2% are enrolled so
that they can obtain a job. Those wishing to obtain a better job
through Adult Basic Education were 38.7%.

According to the printouts concerning those who have left the pro-
gram (Figure 19), 170 enrollees have become employed. Of this group,
123 have left the program and forty-seven are still in the program.
This is 5.4% of the total enrollment.

FIGURE 18

DROPOUTS – REASONS WHY STUDENTS LEFT THE PROGRAM

Perhaps the most important of all the charts and graphs, Figure 18 illustrates the reasons why the students have left the Adult Basic Education program. There were a total of 1,020 students or 32.2% of the total enrollment who dropped out. It is intersting to note that 12.2% or 123 people became employed and dropped from the program. Considering the type of physical work and long hours that many of these people would be working, it is not surprising that they found it necessary to drop from the program. A large group, 20.2% left the program because of lack of interest. A small number of people, 0.5% or 5 people, dropped due to child care problems. Approximately one third of those who left the program are in the "Other" category. It has been determined that the major portion of these people dropped due to transportation problems. This indicates the importance of class location in Adult Basic Education.

Bar chart with values:
- Employed: 12.1
- Entered Training: 5.2
- Job Change: 6.3
- Moved: 8.9
- Health: 5.9
- Family Problems: 7.5
- Lack of Interest: 20.2
- Child Care: .5
- Other (Mainly Transportation): 34.5

FIGURE 19

SUBJECTS TAUGHT AND TIME SPENT ON EACH

Figure 19 shows the subjects taught and the percentages of the
total hours, 34,282, in each subject. A total of 69.9% of the
time was spent on the five different areas of English. This
suggests that regardless of the amount of previous education
many of the enrollees had a basic problem with the English
language. Relatively small amounts of time were spent in
other subjects, which may be accounted for by the fact that
a good foundation in English is necessary before a great
deal can be accomplished in the other areas. Also, one of
the primary purposes of Adult Basic Education is to provide
education in the use of the English language.

Figure 20 (on the next page) shows student improvement, achievement and progress and includes all of the behavioral patterns in the tables on pages 24, 25, 26, 27, 28, and 29.

A total of 3,162 students, including dropouts were enrolled during the reporting year and 6,770 student achievements were reported giving an average of at least two improvements per student. Some students, of course, made a number of achievements while others made smaller amounts of improvement or none at all.

There were some students listed in each category, ranging from nine in "Discontinued Public Welfare" to 937 in "Asks Questions". Several of the categories with larger numbers recorded were in attitudes and behavior -- "Developed Self-Assurance," "Asks Questions," "Takes Initiative," "Neatness".

There can be little question of the need to build behavioral and attitudinal objectives into this program and subsequently attempt to measure them. It is important that 876 students developed assurance because of their Adult Basic Education, or at least the influence the program had on them. The same is true for 937 students who asked questions and 616 who took some kind of initiative.

A large number of students recorded an improvement in speech. This may be due to lack of practice in speaking English prior to coming to the program. The number no longer on welfare is very small; however, only a few students listed welfare as their source of income, 0.3%. The relatively small numbers in "Read-First Time" and "Write-First Time" can be explained by the fact that many students had completed several years of school prior to entering this program.

A total of 170 enrollees have become employed including 123 who dropped out of the program. This is 5.4% of total enrollment. Sixty people or 1.4% of total enrollment have gotten better jobs. Also eighty-eight people, thirty-five in the program and fifty-three who dropped out, have entered job or vocational training.

FIGURE 20

STUDENT ACHIEVEMENTS
Discussion and Recommendations

Problems

As in any new program, especially one departing completely from established procedures, numerous problems were encountered. Many of them were solved but some remained to detract from the success of the project. One of these was an almost chronic delay in the monthly printouts due to problems in the program and inadequate traffic control in the data processing center. A change of administration occurred in the State Department Data Processing Center halfway through the year which also resulted in considerable confusion over schedules, program documentation, and handling input data.

A more serious problem that persisted throughout the year was a partial failure in communications between the Research Coordinating Unit and the Division of Adult Basic Education. Although the original agreement was satisfactorily clear to both agencies some confusion resulted from later interpretations of responsibility and omissions in detail. A certain amount of administrative breakdown was evident in decisions made at the top which were not adequately transmitted to the staff. The most serious failure in communications was between the Research Coordinating Unit and Adult Basic Education project officers. Initially these communications were channeled through the Division staff, but this proved totally unworkable and was changed halfway through the year. A satisfactory system of direct communications with project officers was never fully established. This was due to lack of control over reporting by the Research Coordinating Unit and/or inadequate administration of reporting by the Division of Adult Basic Education.

Some confusion was created through mistakes made in the original design of reporting forms which could not be corrected because they had been printed in quantity by a commercial firm. This was further aggravated by a lack of clarity in the printout tables due to abbreviated headings and difficulty in locating information. Explanatory notes were added to the tables after the first few printouts were made but the Division of Adult Basic Education never seemed to fully understand what the tables contained.

Another problem that was never completely solved was the inability of the computer programming personnel to handle the lag in enrollment cards behind student data from the monthly report forms. At first this resulted in considerable rejection of incomplete data by the computer and required throughout the year an excessive amount of hand checking and tracing. A substantial amount of data were incomplete during the year and in some cases were never collected because of difficulties in using the forms. Skill

55

center curriculum information could not be adapted to the general reporting form. Finally there was a continual lag in feedback from the Division of Adult Basic Education to the Research Coordinating Unit on results of the system as shown in the printouts and problems encountered in using these results. This was a communications problem again for which a solution should have been found.

Limitations

Ideally it should be possible for an outside objective agency to process another agency's records, but in this case it did not prove practicable. At the same time the Division of Adult Basic Education did not acquire sufficient familiarity with the system in one year to make possible a smooth transition in their taking it over. Consequently some of the achievements probably will be lost.

No system is any better than the validity of the records used, and the records generated in this system were quite uneven. The leniency with which enrollment data were gathered was a serious handicap. Some of the data collected are invalid because it was possible only to collect them from a very small number of persons. The most serious limitation in this project was inadequate adminstration of data reporting. This may have been equally true of the previous hand system, but in a computer operated system it shows up much sooner and much more conspicuously.

Achievements

In spite of the problems encountered and in spite of limitations in the results, an automated system has been designed, field tested, and largely de-bugged. It works. It provides considerably more data on every program and class than can be collected in a hand system and analyzes the results in monthly summaries that are current and quite capable of being complete. Experience has been gained in using the system by the Division of Adult Basic Education staff, the teachers, project officers, and the State Department of Public Instruction Data Processing Center. An evaluation of the total program by an evaluation team at the University of Arizona was made possible using the computer input.

The Division uses the printouts as source data for the preparation of United States Office of Education reports. These reports are submitted quarterly, and an annual report in summary form is also required. (See Appendices H, I, and J). These documents were used as the main criteria for the design of material contained in the printouts.

Probably most important has been the actual production of summary tabulations that revealed for the first time to the State Division of Adult Basic Education just how many students they have had this year, the characteristics of those students, and what they achieved -- or at any rate what was actually reported by their teachers and project officers.

Recommendations

1. The second-year phase originally planned for this project should be carried out. Apparently considerable uncertainty and confusion exists over the use of curriculum materials in Adult Basic Education, and the record keeping system at its present stage is not capable of measuring the effectiveness of the subject matter or materials used. A teacher evaluation probably should be made of textbooks and materials used, tests used, and audio-visuals used. These materials should also be analyzed with the followup. Additional research in Adult Basic Education reported in ERIC should be reviewed. New curriculum materials should be examined in the light of documented results -- not commercial publishers' claims -- and experimentation with new materials should be carefully observed and results documented.

2. The project reported here has been a record keeping system -- not an evaluation of the program. Yet the manner in which records are kept has a bearing on the effectiveness of the system, and the records themselves provide the data on which evaluations are based. Greater care needs to be exercised in completing the records used and in forwarding them to the State Division of Adult Basic Education on schedule. Teachers should be better instructed in their responsibility and required to carry it out.

3. Better data are needed on achievement. Standardized tests are not regularly administered, and other data on achievement are largely subjective. Correlation studies between achievement shown in class records and accomplishments reported in the followup have not been made and this should be done.

4. The State Division of Adult Basic Education should assign one staff member to full responsibility for operating the reporting system from this point on, and Research Coordinating Unit consultation should be provided to complete the transition. The work involved is not highly complicated and any good clerk-typist can handle it under supervision. It does require careful attention to detail and strict adherence to a routine.

5. The record keeping system itself as developed up to this point should be revised and expanded somewhat to provide better cost accounting and cost effectiveness data. Reporting of cost data has been extremely haphazard during the past year, and it is doubtful if great reliability can be placed on this part of the report. Cost effectiveness research in education is still in its infancy and not to be relied on for decisions affecting program continuation or perhaps even modification. Nevertheless the data necessary for cost effectiveness research can be collected and should be part of a continual evaluation of the program. It is difficult to assign monetary values to the human accomplishements in a program of this kind, but it is possible to know with a high degree of precision the actual costs that have gone into the program on a per student and per student hour basis.

TOTAL															

INSTRUCTIONS - This report form is largely self-explanatory. Possible problem areas are as follows:

COLS. 2 and 10 - Target Population. The number of adults over 18 years of age who have less than an elementary (8th grade) education. This information is especially important and should be as current and accurate as possible. It can be obtained from local surveys, from the State Department of Education, the Welfare Department, the U.S. Census Bureau or other sources. Consideration should be given to the incoming and outgoing migrant populations, which affect target population and enrollment figures. Program progress will be indicated each quarter by subtracting the number of graduates (Col. 10) from the target population at the beginning of the quarter (Col. 2).

COLS. 3, 4, and 5 - New Enrollments By Grade Level. List the number of new enrollees during the quarter by Beginning Level (Grades 1 - 3), Intermediate Level (Grades 4 - 6), and Advanced Level (Grades 7 & 8). This requires a testing program and the keeping of records by grade levels indicated.

COLS. 7 and 8 - Students In Class. As another indication of program progress, Cols. 7 and 8 will compare the number of students in class during the previous quarter with students in the current quarter being reported.

COL. 9 - List only the teachers actually teaching classes.

COL. 11 - Drop-Out For Employment. List the number of students dropping out because of finding employment or changing to a better job.

COL. 12 - Drop-Out For Other Reasons. List the number of drop-outs for all other reasons besides finding a new or better job, such as job changes, seasonal employment, sickness, lack of interest, transfers, etc.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
OFFICE OF EDUCATION
WASHINGTON, D.C. 20202

ADULT BASIC EDUCATION ANNUAL PROGRAM
(As required by the Adult Education Act of 1966)

PERIOD COVERED		FORM APPROVED BUDGET BUREAU NO. 51-R0684
FROM	TO	
STATE		DATE OF REPORT

INSTRUCTIONS: This form is to provide the Commissioner of Education with a detailed report on Adult Basic Education activities throughout the entire State for the fiscal year. A signed original and copies of this report should be transmitted to the Chief, Adult Education Branch, Office of Education, Washington, D.C. 20202, by September 1.

PART I - STATISTICAL (A total figure for the entire State should be entered for each item.)
(Definitions are provided for items discussed in Part I)

A. STUDENTS IN THE ABE PROGRAM THIS FISCAL YEAR *(At least 2 weeks of attendance)*	
1. TOTAL NUMBER OF ALL STUDENTS IN THE PROGRAM	
a. BY GRADE LEVEL	
(1) BEGINNING LEVEL (1-3)	
(2) INTERMEDIATE LEVEL (4-6)	
(3) ADVANCED LEVEL (7-8)	
b. BY SEX	
(1) MALE	
(2) FEMALE	
c. BY AGE RANGE	
(1) 18-24	
(2) 25-34	
(3) 35-44	
(4) 45-54	
(5) 55-64	
(6) 65-OVER	
d. BY RACE	
(1) WHITE	
(2) NEGRO	
(3) AMERICAN INDIAN	
(4) ORIENTAL	
(5) OTHER NON-WHITE	
2. NUMBER OF ABE STUDENTS, BY SELECTED CATEGORIES	
a. BY ETHNIC GROUP	
(1) CUBANS	
(2) MEXICAN-AMERICANS	
(3) PUERTO RICANS	
b. BY TYPE OF INSTITUTION	
(1) CORRECTIONAL	
(2) HOSPITAL	
(3) OTHER TYPE OF INSTITUTION	
c. MIGRANT: MIGRANT WORKERS ARE INDIVIDUALS WHOSE PRIMARY EMPLOYMENT IS ON A SEASONAL OR OTHER TEMPORARY BASIS AND WHO ESTABLISH TEMPORARY RESIDENCES, WITH OR WITHOUT THEIR FAMILIES, FOR THE PURPOSE OF SUCH EMPLOYMENT	
d. WELFARE RECIPIENT	
3. TOTAL NUMBER OF NEW ENROLLEES DURING THIS FISCAL YEAR	
a. New For Nation And State (E_1): The total number of ABE students who entered for the first time in any fiscal year an ABE class in the United States or its outlying areas during this fiscal year.	
b. NOT NEW FOR NATION, NEW FOR STATE (E_2): THE TOTAL NUMBER OF ABE STUDENTS WHO PREVIOUSLY ENTERED AN ABE CLASS IN ANOTHER STATE OR OUTLYING AREA IN ANY FISCAL YEAR, BUT WHO HAVE NOT PREVIOUSLY ENTERED AN ABE CLASS IN THE GIVEN STATE DURING THIS FISCAL YEAR	
4. NUMBER OF STUDENTS THAT COMPLETED THE BEGINNING LEVEL (1-3)	
5. NUMBER OF STUDENTS THAT COMPLETED THE INTERMEDIATE LEVEL (4-6), WHO INITIALLY ENROLLED AT	
a. BEGINNING LEVEL (1-3)	
b. INTERMEDIATE LEVEL (4-6)	
6. NUMBER OF STUDENTS THAT COMPLETED THE ADVANCED LEVEL (7-8), WHO INITIALLY ENROLLED AT	
a. BEGINNING LEVEL (1-3)	
b. INTERMEDIATE LEVEL (4-6)	
c. ADVANCED LEVEL (7-8)	
7. NUMBER OF SEPARATIONS, BY GRADE LEVEL	
a. BEGINNING LEVEL (1-3)	
b. INTERMEDIATE LEVEL (4-6)	
c. ADVANCED LEVEL (7-8)	
8. NUMBER OF SEPARATIONS FOR	
a. EMPLOYMENT	
b. ENTRY INTO A TRAINING PROGRAM	
c. JOB CHANGE	
d. LACK OF INTEREST	
e. OTHER KNOWN REASONS (Specify)	
(1)	
(2)	
(3)	
(4)	
f. UNKNOWN REASONS	
TYPED NAME OF STATE DIRECTOR	

9. AGGREGATE HOURS MEMBERSHIP, ALL STUDENTS: THE SUM OF THE HOURS PRESENT AND ABSENT OF ALL ABE STUDENTS WHEN CLASSES ARE IN SESSION DURING THE FISCAL YEAR, JULY 1 THROUGH THE FOLLOWING JUNE 30.	
B. LOCATION OF ABE CLASSES: AN ABE CLASS IS A GROUP OF ABE STUDENTS ASSEMBLED FOR INSTRUCTION FOR A GIVEN PERIOD OF TIME UNDER ONE OR MORE ABE TEACHERS IN A SITUATION WHERE THE TEACHER(S) AND THE STUDENTS ARE IN THE PRESENCE OF EACH OTHER.	
10. NUMBER OF CLASSES HELD IN	
a. PUBLIC SCHOOL BUILDINGS	
b. ALL OTHER FACILITIES	
c. TOTAL NUMBER OF CLASSES*	
C. TEACHING AND LEARNING	
11. AVERAGE NUMBER OF HOURS OF INSTRUCTION TO COMPLETE**	
a. BEGINNING LEVEL (1-3)	
b. INTERMEDIATE LEVEL (4-6)	
c. ADVANCED LEVEL (7-8)	
12. NUMBER OF TEACHER TRAINING WORKSHOPS	
a. STATE	
b. LOCAL	
13. NUMBER OF PERSONNEL THAT RECEIVED PRE-SERVICE AND/OR IN-SERVICE ABE TRAINING	
a. NATIONAL TRAINING	
b. STATE TRAINING	
c. LOCAL TRAINING	
14. CLASSES WHERE PROGRAMED INSTRUCTION METHODS WERE USED *(programed instruction: instruction utilizing a workbook, textbook, or mechanical and/or electronic device which has been "programed" to help students attain a specified level of performance by (a) providing instruction in small steps, (b) asking one or more questions about each step in the instruction and providing instant knowledge of whether each answer is right or wrong, and (c) enabling students to progress at their own pace)*	
a. NUMBER OF THESE CLASSES THIS YEAR	
b. NUMBER OF STUDENTS IN THESE CLASSES	
c. AVERAGE NUMBER OF HOURS OF INSTRUCTION IN THESE CLASSES TO COMPLETE	
(1) BEGINNING LEVEL (1-3)	
(2) INTERMEDIATE LEVEL (4-6)	
(3) ADVANCED LEVEL (7-8)	
D. ADULT BASIC EDUCATION PERSONNEL	
15. ABE TEACHERS	
a. NUMBER	
b. AGGREGATE HOURS OF INSTRUCTION FOR THE FISCAL YEAR	
16. ABE COUNSELORS	
a. NUMBER	
b. AGGREGATE HOURS OF COUNSELING FOR THE FISCAL YEAR	
17. ABE LOCAL SUPERVISORY PERSONNEL	
a. NUMBER	
b. AGGREGATE HOURS OF SUPERVISION FOR THE FISCAL YEAR	
18. ABE STATE LEVEL ADMINISTRATION AND SUPERVISORY PERSONNEL	
a. NUMBER	
b. AGGREGATE HOURS OF ADMINISTRATION AND SUPERVISION FOR THE FISCAL YEAR	
19. ALL OTHER ABE PERSONNEL	
a. AT THE LOCAL LEVEL	
(1) NUMBER	
(2) AGGREGATE HOURS OF EMPLOYMENT FOR THE FISCAL YEAR	
b. AT THE STATE LEVEL	
(1) NUMBER	
(2) AGGREGATE HOURS OF EMPLOYMENT FOR THE FISCAL YEAR	
E. ADULT BASIC EDUCATION ADVISORY COMMITTEES	
20. NUMBER OF LOCAL ABE ADVISORY COMMITTEES OPERATING	
21. IS A STATE ABE ADVISORY COMMITTEE OPERATING? ☐ a. YES ☐ b. NO	
SIGNATURE OF STATE DIRECTOR	

*Total number of classes reported on Line 10c should include those classes reported on Line 14a.

**Average number of hours of instruction for completion of levels reported on Line 11 should not include hours shown on Lines 14c(1), 14c(2) and 14c(3).

OE FORM 3058, (3/68)

INFORMATION REQUESTED ON REVERSE SIDE OF FEDERAL REPORT OE 3058

ADULT BASIC EDUCATION ANNUAL PROGRAM

PART II – NARRATIVE (Provide in narrative format descriptive information ex-
plaining overall activities of the Adult Basic Education Program in
this state during the fiscal year. Please attach other narrative
information considered to be appropriate.) (Use additional pages
as necessary for any item.)

A. Describe any special, demonstration, research and/or innovative ABE pro-
jects, including the number of ABE students involved.

B. Describe specific successes and accomplishments resulting from the ABE pro-
gram, such as the number of ABE students registering to vote for the first
time, the number obtaining jobs or getting promotions, and the number dis-
continuing public aid.

C. Describe actual state and local program activities with cooperating public
and private agencies, such as MDTA, CAP, Headstart, VISTA, Work Study, work
experience, Vocational Education, Literacy Councils, private industry,
churches and unions.

D. Describe the major problems of the ABE program at the state and local levels,
such as classes curtailed or closed, approximate number of adults on ABE
waiting lists, teacher or administrator shortages, problems of matching funds,
maintenance of effort, recruiting facilities, organization, and lack of sup-
port.

E. Describe the instructional materials used in regular ABE classes and in ABE
classes where programmed instructional methods were used.

YOU HAVE BEEN SELECTED TO BE A PART OF A STATE-WIDE SURVEY OF ADULT BASIC EDUCATION STUDENTS. IT IS VERY IMPORTANT THAT YOU FILL IN AND RETURN ONLY THE OTHER HALF OF THIS CARD. PLEASE READ THE FOLLOWING INSTRUCTIONS CAREFULLY.

1.   Please mark your answer to each question.   USE SOFT PENCIL ONLY.

2.   Full-time work is 25 or more hours per week. Part-time work is less than 25 hours per week.

Thank you for your cooperation.   You have performed a valuable service to your school, your teachers and yourself.

←──────SEPARATE CARDS AT PERFORATED FOLD.   MAIL OTHER PART OF CARD.   NO STAMPS NEEDED.

←──────SEPARATE CARDS AT PERFORATED FOLD.   RETURN THIS CARD ONLY.   NO STAMPS NEEDED

ADULT BASIC FOLLOW-UP

1. Did you finish the class? YES ☐ NO ☐	5. Has this class helped you prepare for job training? YES ☐ NO ☐
